4344 SERIES

HERMETIC SEALED THERMOSTATS

Introduction

The Klixon® 4344 precision thermostat is constructed with a snap-acting bimetal disc, which serves as the actuating element. As the temperature reaches a pre-determined calibration point, the disc snaps to its reverse curvature producing a crisp, positive switching action inherent to Klixon® thermostats. This feature assures reliable, consistent operating temperature over a long cycle life. The standard thermostat is copper-nickel plated with silver contacts. Other plating finishes are available upon request. Gold plated contacts can be furnished for the electrical loads listed in the table below to assure reliable circuit switching under low wattage conditions. Gold plated contacts are not suitable for higher loads.

Our most common mounting configurations are depicted in the following pages. Many other varieties are available. Leads can be welded to pin type terminals to form an integral unit.

The switch can be custom packed into a probe, strap mount, or immersion thermostat. Consult the factory for special requests.

4344 - 7

4344 - 101

4344 - 142

4344 - 135

Features

- Snap-action switching
- Rapid thermal response
- Single pole, single throw
- Normally open or normally closed
- Pre-set, non adjustable calibration

Applications

- Semiconductor cryogenic pumps
- Hazardous duty motors
- Submersible pumps
- Fire suppression equipment
- Medical X-ray tubes
- Medical incubator thermal control
- Locomotive and rail car heaters
- Marine engine heaters

Switching Action

All thermostats are supplied with single pole, single throw switching. The contacts can be constructed as:

Normally Closed: Limit type application; contacts open on temperature rise at a predetermined temperature to de-energize the circuit. Contacts automatically re-close as the device cools to a pre-determined temperature.

Normally Open: Fan type application; contacts close on temperature rise at a predetermined temperature to energize the circuit. Contacts automatically reopen as the device cools to a predetermined temperature.

The opening and closing temperatures are pre-set and non-adjustable.

Typical Cross Section View

Operation

When heated, the internal stresses of the bi-metal cause the disc to reverse its curvature with a snap-action at a fixed, preset temperature and operate the electrical contacts.

A decrease in the ambient temperature below the reset temperature of the disc relieves the internal stresses in the disc. The disc returns to its normal curvature and the contacts assume their normal operating position.

SPECIFICATIONS

Performance Characteristics

Switch Action	SPST (Snap Action)																															
Contact Resistance	0.050 ohms maximum per MIL-STD-202, Method 307

Materials and Finish	Unplated 304 stainless for all new designs. (other finishes available upon request)																		

Standard Lead Connections

Leads are available in heat-resistant rubber, neoprene, silicone-rubber and Teflon* in #118 gauge stranded wire in standard incremental lengths of 4" to 36". Other gauge and lengths are available upon request.

* Trademark of E.I. DuPont de Nemours and Co.

DIMENSION

An additional $\pm 3^\circ\text{F}$ tolerance is required for over molded devices.

WARNINGS

RISK OF MATERIAL DAMAGE AND HOT ENCLOSURE

- The product's side panels may be hot, allow the product to cool before touching
- Follow proper mounting instructions including torque values
- Do not allow liquids or foreign objects to enter this product

Failure to follow these instructions can result in serious injury, or equipment damage.

HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

- Disconnect all power before installing or working with this equipment
- Verify all connections and replace all covers before turning on power

Failure to follow these instructions will result in death or serious injury
